

IMPORTANT, PLEASE READ

3.6FS Furl unit

Work Load: ~ 3.600 Kg, Break Load ~2 x MWL
Fully sealed steel roller bearings
DSK 78 Loops, Hard anodized Hi Tensile Aluminum Bodies
Carbon Composite outer cover
Quick release and fit for line

- Make sure mating holes are rounded and free of burrs and sharp edges.
- 8 mm furl line should be soft and should be thick enough to fit centrally in groove when loaded
- Recoat black UV coating periodically to prevent UV damage for long life
- Reduce load to approx ½ MWL for best furling.
